

**SYSTEM AND METHOD FOR  
IMAGE FORMATION THROUGH LAMINATION**

**ABSTRACT OF THE DISCLOSURE**

5           A lamination imaging system of the present invention includes a  
printing system and a lamination module connected to the printing system.  
The lamination module includes a module logic unit for generating imaging  
instructions. The lamination module forms an image from a plurality of  
printed sheets sent from the printing system based on these imaging  
10 instructions. In particular, through a lamination finishing sequence, the  
lamination module laminates the plurality of printed sheets to form the image.
